

## Embolectomy catheters

Single-lumen, irrigation catheters  
without a balloon

The set includes a syringe with a Luer-Lock hub

The catheter is delivered in a rigid tube in sterile peel pouch

# Embolectomy catheters

## Single-lumen, irrigation catheters without a balloon

Catheters are used to remove fresh, soft embolic material from blood vessels in the arterial system.

Catheters are sterile, disposable medical devices. Catheters are visible in X-ray imaging and are fully biocompatible.

Catheters are safe and easy to insert into blood vessels of the arterial system. Symmetry of inflated balloon ensures uniform contact with walls of the blood vessel and enables safe, precise removal of embolic material from the arterial system.

- 1 - Catheters shaft
  - 2 - Length codes
  - 3 - Luer-Lock hub
  - 4 - Mandrel of the catheter
- Elements 1 and 2 form the working part of the catheter

### Technical specification of embolectomy catheters – single-lumen, irrigation catheters without a balloon

REF	Size	Maximum catheter diameter	Length of the working part	Color of the Luer-Lock hub
EP380	3F	1,0 (mm)	76 (cm)	green
